What is Jet Plasma?

Jet Plasma is an advanced technology that brightens, tightens, and rejuvenates the skin by promoting collagen regeneration. Combining Jet (J Plasma) and Cold Plasma, this pain-free procedure utilizes low atmospheric plasma temperature on the skin's surface for optimal results.

It remodels and repairs the skin from within, delivering immediate improvements while also continuing to enhance the skin over the next 6-8 weeks. Additionally, its antibacterial properties make it suitable for acne and other skin conditions.

Jet Plasma can be applied to various areas of the face and body, including the face, neck, belly, knees, and hands.

What does it treat?

- Shallow and deep wrinkles
- Lip lines and smile lines
- Crows feet
- Acne scars
- Pigmentation/Melasma
- Eyelid Lift
- Hair Rejuvenation
- Crepey/Loose Skin

The power of Jet Plasma
